GRO QUICK®

Electric Soil Warming Cable

Built-in thermostat automatically activates cables when soil temperature is below 74°.

The thermostatically controlled heat of Gro-Quick electric soil warming cables gently speeds germination and seedling growth with gentle bottom heat to produce large, healthy plants ready for transplanting. Dependable, hassle free automatic cables features moisture proof PVC jacket and sealed waterproof connections. Perfect for indoors and outdoors to provide a head start to the regular growing season, whether it's your garage or garden. Economically heats only the soil, not the whole room. Gro-Quick cables come in a full range of easy to install sizes and colors.

Available in five sizes

Match cable length to square footage of planter
